Gentlemen

As you know, we are expediting efforts to host the Superfund Innovative Technology Evaluation (SITE) demonstration of the Colloid Polishing Filter Method (CPFM) technology at the request of EPA Region VIII. Since the SITE demo will involve treatment of water taken from the Operable Unit 4 (Solar Ponds) RCRA modular storage tanks, it is requested that you approve the SITE demo at the Solar Ponds in writing.

The SITE demo of the CPFM technology will use water taken from the OU-4 Interim Measure/Interim Remedial Action modular storage tanks, treat it and return it to the tanks. The water to be treated is water collected from the Interceptor Trench Pump House sump down-gradient from the solar ponds. Treated water will be pre-filtered (to remove bulk solids), pH adjusted and passed through the Filter Flow 1000 "colloid-polishing" material. The pH will be adjusted back to influent levels and returned to the modular storage tanks.

Because of the EPA request to have the SITE demo occur by August 1993, it is requested that we receive approval to proceed as soon as possible.

If you have any questions, please contact Scott Grace of my staff at (303) 966-7199.

Sincerely,

James K. Hartman
Assistant Manager for Transition
and Environmental Restoration
